### Tyrosine Hydroxylase antibody [N1C1] GRP110

<b>Description</b>	The protein encoded by this gene is involved in the conversion of tyrosine to dopamine. It is the rate-limiting enzyme in the synthesis of catecholamines, hence plays a key role in the physiology of adrenergic neurons. Mutations in this gene have been associated with autosomal recessive Segawa syndrome. Alternatively spliced transcript variants encoding different isoforms have been noted for this gene. Tyrosine Hydroxylase antibody [N1C1] detects Tyrosine Hydroxylase protein at cell membrane and cytoplasm by immunohistochemical analysis. Sample: Paraffin-embedded mouse brain. Tyrosine Hydroxylase stained by Tyrosine Hydroxylase antibody [N1C1] (GRP562) di

Whole cell extract (30 µg) was separated by 10% SDS-PAGE, and the membrane was blotted with Tyrosine Hydroxylase antibody [N1C1] (GRP562) diluted at 1:1000. The HRP-conjugated anti-rabbit IgG antibody was used to detect the primary antibody.
