Product Datasheet

LDB1 antibody [N2C3] **GRP116**

Description Binds to the LIM domain of a wide variety of LIM

domain-containing transcription factors. May regulate the

transcriptional activity of LIM-containing proteins by determining specific partner interactions. May play a role in the development of motor neurons. Acts synergistically with LHX1/LIM1 in axis formation and activation of gene expression. Acts with LMO2 in the regulation of red blood cell development, maintaining

erythroid precursors in an immature state.
