

Product Datasheet

Anti-Ms LPAM-1 PE GRP10508

Description	The rat monoclonal antibody DATK32 recognizes an extracellular epitope of integrin alpha 4 (CD49d) and integrin beta7 (Ly69) components of mouse LPAM-1 complex, which is expressed on the majority of peripheral lymphocytes, as well as on subsets of thymocytes and bone marrow cells.
Reactivity	Mouse
Tested Applications	FC
Immunogen	TK1 cells
Concentration	0.5 mg/ml
Storage	Store in the dark at 2-8°C. Do not freeze. Avoid prolonged exposure to light. Do not use after expiration date stamped on vial label.
Note	For research use only.
Isotype	Rat IgG2a kappa
Clonality	Monoclonal
Clone ID	DATK32
Application Notes	Flow cytometry: Recommended dilution: 2 µg/ml.
