## Anti-HLA Class I PE GRP10663

**Description** The antibody MEM-123 reacts with an extracellular epitope of all

human classical MHC Class I molecules (major histocompatibility complex) in native cell-surface forms as well as with human HLA-G cDNA transfected cells. MHC Class I molecules (MHC Class Ia) are expressed on the surface of all human cell types. The antibody MEM-123 completely blocks binding of classical W6/32 to surface-expressed HLA-G, but does not cross-blocks the

antibody MEM-G/9.
