

Product Datasheet

Anti-alpha-Fetoprotein Purified GRP11875

Description	The mouse monoclonal antibody AFP-11 reacts with human alpha-Fetoprotein (AFP), a 70 kDa oncofetal antigen. AFP is a major fetal plasma protein, but is not present in healthy adult tissues. Elevated AFP concentrations in adult plasma may be an early marker of hepatocellular carcinoma or teratoblastoma, while high concentrations in amniotic fluid may indicate severe congenital defects of a fetus.
Reactivity	Human
Tested Applications	ELISA, IHC-P, RIA
Immunogen	purified alpha-Fetoprotein
Concentration	1 mg/ml
Storage	Store at 2-8°C. Do not freeze. Do not use after expiration date stamped on the label.
Note	For research use only.
Isotype	Mouse IgG1
Clonality	Monoclonal
Clone ID	AFP-11
Uniprot ID	P02771
NCBI	174
