Product Datasheet

Rat IgG2b Isotype Control LOW ENDOTOXIN GRP11906

Description This rat IgG2b kappa monoclonal antibody (clone RTG2B1-2, also

known as G2B-1-2 or KLH/G2B-1-2) detects specifically the hemocyanin of keyhole limpet and can be used as a negative

control antibody in other species.

Tested Applications ELISA, FC, FA, ICC, IHC-Fr, IHC-P, IP, WB

Concentration 1 mg/ml

Storage Store at 2-8°C. Do not freeze. Do not use after expiration date

stamped on the label.

Note For research use only.

Isotype Rat IgG2b

Clonality Monoclonal

Clone ID RTG2B1-2

Application Notes Negative control: The reagent is intended as an isotype control to establish the

amount of non-specific antibody binding. For your particular experiment, use the same concentration of this control antibody as the recommended working

concentration of the antigen-specific antibody. Also, when working with

prediluted antibodies, dilute the isotype control to the same concentration as is the concentration of the antigen-specific antibody in the prediluted antibody solution you are using. If under particular experimental conditions the background signal of the isotype control is too high (usually when working concentrations of used antibodies are above $10~\mu g/ml$ of incubation mixture),

change the conditions of your experiment to reduce the background.
