Product Datasheet

Rat IgG2a Isotype Control PE GRP11920

Description This rat IgG2a kappa monoclonal antibody (clone RTG2A1-1, also

known as G2A-1-1 or KLH/G2A-1-1) detects specifically the hemocyanin of keyhole limpet and can be used as a negative

control antibody in other species.

Tested Applications FC

Concentration 0.1 mg/ml

Storage Store in the dark at 2-8°C. Do not freeze. Avoid prolonged

exposure to light. Do not use after expiration date stamped on

vial label.

Note For research use only.

Isotype Rat IgG2a

Clonality Monoclonal

Clone ID RTG2A1-1

Application Notes

Negative control: The reagent is intended as an isotype control to establish the amount of non-specific antibody binding. For your particular experiment, use the same concentration of this control antibody as the recommended working concentration of the antigen-specific antibody. Also, when working with prediluted antibodies, dilute the isotype control to the same concentration as is the concentration of the antigen-specific antibody in the prediluted antibody solution you are using. If under particular experimental conditions the background signal of the isotype control is too high (usually when working concentrations of used antibodies are above 10 $\mu g/ml$ of incubation mixture), change the conditions of your experiment to reduce the background.
