

Product Datasheet

Anti-Helios PE-Cy7 GRP11962

Description	The Armenian hamster monoclonal antibody 22F6 recognizes Helios, a transcription factor (intracellular antigen) expressed in some hematopoietic stem cells, and at high levels in thymic-derived regulatory T cells. The epitope is located between amino acids 51 and 107.
Reactivity	Human, Mouse
Tested Applications	FC
Immunogen	Peptide corresponding to the amino acids 51-107 of Helios
Storage	Store in the dark at 2-8°C. Do not freeze. Avoid prolonged exposure to light. Do not use after expiration date stamped on vial label.
Note	For research use only.
Isotype	Armenian Hamster IgG
Clone ID	22F6
Uniprot ID	Q9UKS7
NCBI	22807
Application Notes	Flow cytometry: The reagent is designed for analysis of human blood cells using 4 µl reagent / 100 µl of whole blood or 10 ⁶ cells in a suspension. The content of a vial (0.4 ml) is sufficient for 100 tests.
