## **Product Datasheet**

## AMBP - Alpha-1-microglobulin GRP12174

Species/Host Rabbit

Reactivity Rat

Predicted Reactivity Mouse

Tested Applications ICC, RIA, WB

Immunogen rat alpha-1-microglobulin, full length, recombinant protein,

overexpressed in baculovirus-infected insect cells with N-terminal

His-tag

Form/Appearance Lyophilized with 0.04% sodium azide

**Storage** Store lyophilized/reconstituted at -20°C; once reconstituted make

aliquots to avoid repeated freeze-thaw cycles. Please, remember to spin tubes briefly prior to opening them to avoid any losses that might occur from lyophilized material adhering to the cap or

sides of the tubes.

**Note** For research use only.

**Clonality** Polyclonal

Purity Serum

MW 27 kDa

Dilution Range 1:5000 (ELISA), 1:200 (IHC), 1:6000 (RIA), 1:2000 (WB)

**Application Notes** Background: Alpha-1-microglobulin is a 27-kDa glycoprotein with

immunosuppressive properties. A gene AMBP in the lipocalin cluster encodes alpha-1-microglobulin together with a Kunitz-type proteinase inhibitor, bikunin. The gene is translated into the alpha-1-microglobulin-bikunin precursor, which is subsequently cleaved and the two proteins are secreted to the blood separately. Alpha-1-microglobulin is found in blood and in connective tissue in most organs.

It is most abundant at interfaces between the cells of the body and the environment, such as in lungs, intestine, kidneys and placenta. Alpha 1-microglobulin is an immunomodulatory protein with a broad spectrum of possible clinical applications and seems a promising marker for evaluation of tubular function. Reconstitution: For reconstitution add 200  $\mu l$  of sterile water.
