## **Product Datasheet**

## THP - Allopregnanolone steroid standard GRP12189

Tested Applications RIA

Form/Appearance Lyophilized

Storage Store lyophilized/reconstituted at -20°C; once reconstituted make

aliquots to avoid repeated freeze-thaw cycles. Please, remember to spin tubes briefly prior to opening them to avoid any losses that might occur from lyophilized material adhering to the cap or sides of the tubes. Protect from light. Can be stored for 1 month

at 4°C in a sealed tube or flask.

**Note** For research use only.

**Application Notes** Additional Information: The lyophilized powder of this standard is not soluble in

water. Standard dissolving instruction: Use ethanol (99.5 %) or methanol to prepare a concentrated (stock) solution of THP standard. This solution can be stored for longer time in a sealed tube. Working solution can be used daily but needs to be changed after one month. Working solution is used to prepare standard points 0-200 pg. It needs to be dried under nitrogen before it is diluted in water based soltion, otherwise the steroid will oxidase. Following dyring, water based solution can be added to this standard. Allopregnanolone standard is made under GMP conditions and thus has the purity standards required for human usage in clinical trials. Produced by Umecrine AB. Background:

Allopregnanolone,

(3alpha-hydroxy-20-oxo-5alphapregnan-11alpha-yl-carboxymethylether), also known as 3alpha,5alpha-tetrahydroprogesterone or THP, a neuroactive steroid secreted by the mammalian ovary, exerts its anesthetic, anxiolytic, and sedative/hypnotic effects through potentiation of GABA A receptors. It is

produced in the human corpus luteum and their release is stimulated by trophic

hormone.
