## **Product Datasheet**

## ER - Estrogen receptor GRP12195

Species/Host Rabbit

Reactivity Human

Predicted Reactivity Mammals

Tested Applications WB

Immunogen KLH conjugated synthetic peptide conserved in sequences of all

known ER-alpha and ER-beta including human ER-alpha PO3372

and human ER-beta Q92731

Form/Appearance Lyophilized in PBS pH 7.4

Storage Store lyophilized/reconstituted at -20°C; once reconstituted make

aliquots to avoid repeated freeze-thaw cycles. Please, remember to spin tubes briefly prior to opening them to avoid any losses that might occur from lyophilized material adhering to the cap or

sides of the tubes.

**Note** For research use only.

**Clonality** Polyclonal

**Purity** Affinity purified serum

**MW** 60-65 kDa

**Uniprot ID** P03372, Q92731

**Dilution Range** 1:5 000 (WB)

Application Notes Additional Information: Antibody will recognize both isoforms: ER-alpha and

ER-beta Background: The estrogen receptor (ER) is a steroid hormone receptor. This protein functions as a nuclear receptor for estrogens such as estradiol. The two different estrogen receptor proteins produced from the ESR1 and ESR2 genes are called the alpha and beta receptors. Alternative names of the protein coded by ESR1 gene: estradiol receptor, ER-alpha, nuclear receptor subfamily 3 group A member 1. Alternative names of the protein coded by ESR2 gene:

nuclear receptor subfamily 3 group A member 2. Reconstitution: For

reconstitution add 100 µl of sterile water
