

## **Product Datasheet**

## Abeta (1-42) - Amyloid-beta peptide 1-42 GRP12216

| Species/Host         | Rabbit  | Ab  | eta 1-  | 42*   |
|----------------------|---|---|---------|-------|
| Reactivity           | Human   | ßu  | 100 ng  | 10 ng |
| Predicted Reactivity | Bovine, Chicken, Dog, Porcine, Rabbit   | 1000 ng   | 100     | 10    |
| Tested Applications  | DOT, ELISA, WB, IL  |   | •       |       |
| Immunogen            | synthetic peptide chosen from human Abeta (1-42) protein.<br>Amino acid sequence:<br>D-A-E-F-R-H-D-S-G-Y-E-V-H-H-Q-K-L-V-F-F-A-E-D-V-G-S-N-K-G-A-I-I-G-L-M-\  | /-G-G   | -V-V-   | I-A   |
| Form/Appearance      | Lyophilized   |   |         |       |
| Storage              | Store lyophilized/reconstituted at -20°C; once reconstituted make<br>aliquots to avoid repeated freeze-thaw cycles. Please, remember<br>to spin tubes briefly prior to opening them to avoid any losses<br>that might occur from lyophilized material adhering to the cap or<br>sides of the tubes.   |   |         |       |
| Note                 | For research use only.  |   |         |       |
| Clonality            | Polyclonal  |   |         |       |
| Purity               | Serum   |   |         |       |
| MW                   | 4.5 kDa   |   |         |       |
| Dilution Range       | 1 : 1000 (DB), 1 : 3000 (ELISA), 1-2 μg/ml (IL)   |   |         |       |
| Application Notes    | Additional Information: The antibody can detect Abeta (1-42), Abeta (1-2<br>Abeta (1-20) and Abeta (1-17). This product exhibits a low reactivity to<br>monomeric Abeta (1-42) as determined by SDS-PAGE and Western<br>blotting.Immunolocalization: human tissue was paraffin-embedded and<br>sectioned. De-waxed and rehydrated in an ethanol gradient. Antigens we<br>retrieved in sodium citrate buffer (pH 6) at 95°C for 1 h. The tissue section<br>separately incubated for 1 h at RT with primary antibody and antibody b<br>was visualized with IgG Preoxidase Reagent Kit. Background: Alzheimer's<br>disease (AD) is the most prevalent neurodegenerative disease in the gro<br>population of elderly people. A hallmark of AD is the accumulation of pla<br>the brain of AD patients. The plaques predominantly consist of aggregate<br>amyloid-beta (Abeta), a peptide of 39-42 amino acids generated in vivo 1<br>specific, proteolytic cleavage of the amyloid precursor protein P05067<br>Reconstitution: For reconstitution add 100 µl of sterile water. | ere<br>ons w<br>indin<br>s<br>wing<br>ques<br>es of | g<br>in |       |
