## **Product Datasheet**

## Rabbit anti-Goat IgG (H&L), ALP conjugated **GRP12253**

Species/Host Rabbit

Reactivity Goat

**Predicted Reactivity** Goat IgG Heavy and Light chains (H&L)

**Tested Applications** ELISA, ICC, WB, IHC

**Immunogen** Purified Goat IgG, whole molecule

Form/Appearance Liquid

Storage Non-diluted antibody is stable for 4 years at 2-8°C. For storage at

-20°C dilute antibody solution with an equal volume of glycerol to obtain final glycerol concentration of 50 % to prevent loss of enzymatic activity. Such solution will not freeze in -20°C. If you are using a 1:5000 dilution prior to diluting with glycerol, then you would need to use a 1:2500 dilution after adding glycerol. Prepare working dilution prior to use and then discard. Be sure to

mix well but without foaming.

Note For research use only.

Clonality Polyclonal

Purified rabbit IgG Purity

**Dilution Range** 1:500-1:2000 (ELISA), 1:50-1:5000 (ICC), 1:20-1:2000

(IHC), 1:500-1:2000 (WB)

Additional Information: No reactivity is observed to non-immunoglobulin goat **Application Notes** 

serum proteins based in immunoelectrophoresis. BSA and milk have to be replaced by other blocking reagents, like doneky serum or commercial formulations which are free from bovine IgG. ALP conjugate is supplied in 30 mM

Triethanolamine, pH 7.2, 5 mM Magnesium Chloride, 0.1 mM Zinc Chloride, 1 % (w/v) BSA, Protease/IgG free. 0.05 % (w/v) of sodium azide is added as

preservative Background: Rabbit anti-goat IgG is a secondary antibody

conjugated to ALP (Alkaline phosphatase) which binds to all goat

immunoglobulins in immunological assays.
