Product Datasheet

Rabbit anti-Goat IgG Fc, HRP conjugated, min. cross-reactivity to human serum GRP12347

Species/Host Rabbit

Form/Appearance Lyophilized

Storage Store lyophilized material at 2-8°C.For long time storage after

reconstitution, dilute the antibody solution with glycerol to a final concentration of 50% glycerol and store as liquid at -20°C, to prevent loss of enzymatic activity. For example, if you have reconstituted 1 mg of antibody in 1.1 ml of sterile water add 1.1 ml of glycerol. Such solution will not freeze in -20°C. If you are using a 1:5000 dilution prior to diluting with glycerol, then you would need to use a 1:2500 dilution after adding glycerol. Prepare working dilution prior to use and then discard. Be sure to mix well

but without foaming.

Note For research use only.

Clonality Polyclonal

Purity Affinity purified IgG

Dilution Range 1 : 500-1 : 5000 (IHC), 1 : 10 000-1 : 50 000 (WB)

Application Notes Additional Information: This antibody reacts with the heavy chains on goat IgG

based on immunoelectrophoresis.Minimum cross-reactivity is observed to non-immunoglobulin goat serum proteins or immunoglobulin light chains based on immunoelectrophoresis.Minimum cross-reactivity is observed with human serum proteins based on immunoelectrophoresis.Antibody is supplied in 10 mM

sodium phosphate, 150 mM sodium chloride, pH 7.2, 1 % (w/v) BSA,

Protease/IgG free and 0.1 % (v/v) Kathon CG is used as preservative.BSA and milk have to be replaced by other blocking reagents, like doneky serum or commercial formulations which are free from bovine IgG. Background: Rabbit anti-goat IgG Fc,HRP conjugated, is a secondary antibody which binds to goat IgG Fc constant part in immunological assays. Antibodies are adsorbed against human serum and affinity purified using solid phase goat IgG. Reconstitution: For reconstitution add 1.1 ml of sterile water. Let it stand 30 minutes at room

temperature to dissolve. Prepare fresh working dilutions daily.
