Product Datasheet

Goat anti-Human IgM (µ chain), F(ab)'2 fragment, ALP conjugated, min. cross-reactivity to human IgG or IgA GRP12492

Species/Host Goat

Form/Appearance

Liquid

Storage

Non-diluted antibody is stable for 4 years at 2-8°C. For storage at -20°C dilute antibody solution with an equal volume of glycerol to obtain final glycerol concentration of 50 % to prevent loss of enzymatic activity. Such solution will not freeze in -20°C. If you are using a 1:5000 dilution prior to diluting with glycerol, then you would need to use a 1:2500 dilution after adding glycerol. Prepare working dilution prior to use and then discard. Be sure to

mix well but without foaming.

Note

For research use only.

Clonality

Polyclonal

Purity

Affinity purified IgG, F(ab)'2 fragment

Dilution Range

1:50-1:5000 (ICC), 1:20-1:2000 (IHC), (Flow cyt), 1:500-1:

2000 (WB)

Application Notes

Additional Information: This antibody reacts with:heavy (μ) chains on human IgM based on immunoelectrophoresis.Minimum cross-reactivity is observed to: non-immunoglobulin serum proteins human IgG or IgA.Antibody is supplied in 30 mM triethanolamine, pH 7.2, 5 mM magnesium chloride, 0.1 mM zinc chloride, 1% (w/v) BSA, Protease/IgG free , 0.05% (w/v) sodium azide as preservative. Background: Goat anti-human IgM (μ chain), ALP (alkaline phosphatase) conjugated is a F(ab) 2 fragment of a secondary antibody which binds to human

conjugated, is a F(ab)'2 fragment of a secondary antibody which binds to human IgM in immunological assays. Antibodies are adsorbed against human IgG or IgA. Antibody purity is > 90% based on SDS-PAGE. Antibody solution may contain

small amounts of intact IgG.
