Product Datasheet

Goat anti-Human IgA heavy (alpha chain), F(ab)'2 fragment, HRP conjugated GRP12631

Species/Host Goat

Reactivity Human

Predicted Reactivity Human IgA Heavy chain (alpha) F(ab)'2 fragment

Tested Applications ELISA, WB, IHC

Immunogen purified human IgA, heavy (alpha chain)

Form/Appearance Lyophilized

Storage Store lyophilized material at 2-8°C.For long time storage after

reconstitution, dilute the antibody solution with glycerol to a final concentration of 50% glycerol and store as liquid at -20°C, to prevent loss of enzymatic activity. For example, if you have reconstituted 0.5 mg of antibody in 0.55 ml of sterile water add 0.55 ml of glycerol. Such solution will not freeze in -20°C. If you are using a 1:5000 dilution prior to diluting with glycerol, then you would need to use a 1:2500 dilution after adding glycerol. Prepare working dilution prior to use and then discard. Be sure to

mix well but without foaming.

Note For research use only.

Clonality Polyclonal

Purity Affinity purified goat IgG

Dilution Range The optimal working dilution should be determined by the

investigator.

Application Notes Additional Information: No reactivity is observed to the light chains or

non-immunoglobulin human serum proteins. HRP-conjugate is supplied in 10 mM

Sodium Phosphate, 0.15 M Sodium Chloride, pH 7.2, 10 % (w/v) BSA,

Protease/IgG free 0.1% (v/v) of Kathon CG is used as preservative. Use of sodium azide will inhibit enzyme activity of horseradish peroxidasePurity is $\geq 90\%$ based

on SDS-PAGE. May contain small amounts of intact IgG. Background: Goat anti-human IgA heavy (alpha chain) is a secondary antibody conjugated to HRP

which binds to human IgA heavy (alpha chain) F(ab)'2 fragments in

immunological assays. Reconstitution: For reconstitution add 0.55 ml of sterile

water
