

Product Datasheet

Chicken anti-Rabbit IgG (H&L), Affinity purified, Unconjugated, min. cross-reactivity to human, mouse IgG GRP12689

Species/Host	Chicken
Reactivity	Rabbit
Predicted Reactivity	Rabbit IgG (H&L)
Tested Applications	ELISA
Immunogen	Purified Rabbit IgG
Form/Appearance	Liquid
Storage	Store non-diluted antibody at 2-8°C. For storage at -20°C dilute antibody solution with an equal volume of glycerol to obtain final glycerol concentration of 50 % to prevent loss of enzymatic activity. Such solution will not freeze in -20°C. If you are using a 1:5000 dilution prior to diluting with glycerol, then you would need to use a 1:2500 dilution after adding glycerol. Prepare working dilution prior to use and then discard. Be sure to mix well but without foaming!!!Store non-diluted antibody at 2-8°C. For storage at -20°C dilute with an equal volume of glycerol to prevent loss of enzymatic activity. Prepare working dilution prior to use and then discard.Shelf life is 1 year from date of receipt.
Note	For research use only.
Clonality	Polyclonal
Purity	Affinity purified chicken IgY
Dilution Range	The optimal working dilution should be determined by the investigator.
Application Notes	Additional Information: Antibody reacts with the heavy chains on rabbit IgG and with the light chains on all rabbit immunoglobulins based on immunoelectrophoresis.No reactivity is observed to non-immunoglobulin rabbit serum and human or mouse serum or IgG based on immunoelectrophoresis. Antibody is supplied in 10 mM Sodium Phosphate, 0.15 M Sodium Chloride, pH 7.2, 0.05 % (w/v) of Sodium azide as preservative.Antibody concentration is 4.5 mg/ml. Background: Chicken anti-rabbit IgG (H&L)is a secondary antibody which binds to rabbit IgG (H&L) in immunological assays.
