Product Datasheet

Rabbit anti-Goat IgG (H&L), F(ab)'2 fragment, Affinity purified, Unconjugated GRP12743

Species/Host Rabbit

Form/Appearance Liquid

Storage Store at 2-8°C.

Note For research use only.

Clonality Polyclonal

Purity Affinity purified rabbit IgG

Dilution Range The optimal working dilution should be determined by the

investigator.

Application Notes Additional Information: This antibody reacts with the heavy chains on goat IgG

and with the light chains on all goat immunoglobulins based on immunoelectrophoresis. Minimum cross-reactivity is observed to

non-immunoglobulin goat serum proteins based on

immunoelectrophoresis. Antibody is supplied in 10 mM sodium phosphate, 150 mM sodium chloride, pH 7, 0.05 % (M/V) sodium azide as preservative. BSA and milk have to be replaced by other blocking reagents, like doneky serum or commercial formulations which are free from bovine IgG. Background: Rabbit anti-goat IgG (H&L) F(ab)'2 fragment is an unconjugated secondary antibody which is reacting with goat IgG (H&L) F(ab)'2 in immunological assays and is affinity purified. Antibody purity is > 90% based on SDS-PAGE. Antibody solution

may contain small amounts of intact IgG.
