Product Datasheet

Goat anti-Mouse IgG Fc, DyLight® 650 conjugated **GRP12895**

Species/Host Goat

Purified Mouse IgG Fc **Immunogen**

Form/Appearance Lyophilized

Store lyophilized material at 2-8°C. Product is stable for 4 weeks Storage

at 2-8°C after rehydration. For long time storage after

reconstitution, dilute the antibody solution with glycerol to a final concentration of 50% glycerol and store as liquid at -20°C, to prevent loss of enzymatic activity. For example, if you have reconstituted 1 mg of antibody in 1.1 ml of sterile water add 1.1 ml of glycerol. Such solution will not freeze in -20°C. If you are using a 1:5000 dilution prior to diluting with glycerol, then you would need to use a 1:2500 dilution after adding glycerol. Prepare working dilution prior to use and then discard. Be sure to mix well

but without foaming.

Note For research use only.

Clonality Polyclonal

Purity Affinity purified goat IgG

Dilution Range 1:20-1:2000 for most applications

Application Notes

Additional Information: Conjugate is present in 10 mM Sodium Phosphate, 0.15 M Sodium Chloride, pH 7.2, 1 % (w/v) BSA, Protease/IgG free. 0.05 % (w/v) sodium azide is added as preservative. Based on immunoelectrophoresis, this antibody reacts with: heavy (γ) chains on mouse IgGNo reactivity is observed to:

non-immunoglobulin human serum proteins, light chains on all mouse

immunoglobulins, F(ab)'2 fragment of mouse IgG Background: Goat anti-mouse

IgG Fc - DyLight®650 Conjugated is a secondary antibody conjugated to DyLight® 650, which binds to mouse IgG Fc in immunological assays.DyLight® 650 has Amax = 652 nm, Emax = 672 nm. Antibodies are purified using solid phase Mouse IgGDyLight® is a registered trade mark of Thermofisher Inc., and its subsidaries. Reconstitution: For reconstitution add 1.1 ml of sterile water. Let it stand 30 minutes at room temperature to dissolve. Prepare fresh working

dilutions daily.
