Product Datasheet

ASyO2-biotinylated - Mouse anti-human alpha-synuclein - oligomer-specific GRP12966

Species/Host Mouse

Reactivity Human

Tested Applications ELISA

Immunogen synthetic peptide derived from human alpha-synuclein

Glu131-Ala140

Form/Appearance Lyophilized

Storage For short time storage add sodium azide and store at +4°C. For

long time storage store lyophilized/reconstituted at -20°C; once reconstituted make aliquots to avoid repeated freeze-thaw cycles. Please, remember to spin tubes briefly prior to opening them to avoid any losses that might occur from lyophilized material

adhering to the cap or sides of the tubes.

Note For research use only.

Isotype lgG1

Clonality Monoclonal

Purity Affinity purified in PBS pH 7.4, no preservatives

MW 14 kDa

Dilution Range 2-4 ug/ml (ELISA)

Application Notes Additional Information: Antibody is biotinylated Background: Alpha-synuclein is

normally an unstructured soluble protein that can aggregate to form insoluble

fibrils in pathological conditions characterized by Lewy bodies, such as

Parkinson's disease, dementia with Lewy-bodies, and multiple system atrophy. In analogy to many other amyloid associated disorders, alpha-synuclein may also form oligomeric assemblies. These small and soluble forms have been suggested to exert a stronger tissue damaging effect as compared to the monomeric and

fibrillar counterpart. Using a recently developed technique a monoclonal oligomer-specific antibody has been designed. Reconstitution: For reconstitution

add 50 µl of sterile water.
