Application Notes Background: Alzheimer's disease (AD) is the most prevalent neurodegenerative

disease in the growing population of elderly people. A hallmark of AD is the accumulation of plaques in the brain of AD patients. The plaques predominantly consist of aggregates of amyloid-beta (Abeta), a peptide of 39-42 amino acids generated in vivo by specific, proteolytic cleavage of the amyloid precursor

protein. Reconstitution: For reconstitution add 50 µl, of sterile water.
