## **Product Datasheet**

## Anti-SARS-CoV-2 Nucleocapsid (N) Protein (RABBIT) Antibody GRP13247

## Description

SARS-CoV-2 (Severe acute respiratory syndrome coronavirus 2 or COVID-19) is related to SARS-CoV, MERS, and four milder coronaviruses (HKU1, NL63, OC43 and 229E). SARS-CoV-2 is an enveloped positive-strand RNA virus that consists of four structural proteins: spike (S) protein, envelope (E) protein, membrane (M) protein and nucleocapsid (N) protein. The spike protein is the most important surface protein of coronavirus. SARS-CoV-2 has a high affinity binding to human receptor ACE2 (angiotensin-converting enzyme 2) within respiratory epithelial. ACE2 is a membrane-bound aminopeptidase that has a vital role in the cardiovascular and immune systems. The nucleocapsid protein is a most abundant protein of coronavirus. The coronavirus nucleocapsid protein is the major structural component of virions that associates with genomic RNA to form a long, flexible, helical nucleocapsid. Anti-SARS-CoV-2 Nucleocapsid (N) Protein Antibody is useful for researchers interested in diagnostics and viral research.

Species/Host Rabbit

Reactivity Virus

Conjugation Unconjugated

Tested Applications ELISA, WB

Immunogen Anti-SARS-CoV-2 Nucleocapsid (N) Protein Antibody was produced

by repeated immunizations with purified recombinant SARS-CoV-2 Nucleocapsid protein with C-terminal His-tag, derived from the

transfected human HEK293 cells.

Form/Appearance Liquid (sterile filtered)

Concentration 1.0 mg/mL

Storage Store vial at -20° C prior to opening. Aliquot contents and freeze

at -20° C or below for extended storage. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. This product is stable for several

weeks at 4° C as an undiluted liquid. Dilute only prior to

immediate use.

**Note** For research use only.

**Clonality** Polyclonal

Purity This affinity purified antibody is directed against SARS

Coronavirus 2 Nucleocapsid (N) protein. The product was purified from monospecific antiserum by immunoaffinity chromatography over SARS CoV-2 resin. BLAST analysis was used to suggest reactivity with related Coronavirus proteins. Cross reactivity with homologues from other sources has not been determined.

**Dilution Range** 1:500,000-1:600,000

**Application Notes** Anti-SARS-CoV-2 Nucleocapsid (N) Protein Antibody has been tested for use in

Western Blot. Specific conditions for reactivity should be optimized by the end user. Expect a band approximately 47 kDa in size corresponding to SARS-CoV-2 Nucleocapsid (N) protein by western blotting in the appropriate cell lysate or

extract.
