Product Datasheet

Anti-Hu CD41/CD61 (PAC-1 epitope) PE **GRP13266**

Description

CD41 (platelet glycoprotein IIb, integrin alpha IIb) is composed of two subunits (120 kDa transmembrane alpha chain and 23 kDa $\,$ extracellular beta chain) and interacts with CD61 (platelet glycoprotein Illa, integrin beta 3) in the presence of calcium to form a functional adhesive protein receptor. CD41/CD61 complex is one of the earliest markers of the megakaryocytic lineage. Upon blood vessel damage, this receptor binds to a variety of proteins including von Willebrand factor, fibrinogen, fibronectin and vitronectin, and it is involved in platelet aggregation.

Reactivity Human

Tested Applications FC

Human platelets Immunogen

Form/Appearance PΕ

Stabilizing phosphate buffered saline (PBS) solution containing 15 **Preservatives**

mM sodium azide

Storage Store in the dark at 2-8°C. Do not freeze. Avoid prolonged

exposure to light. Do not use after expiration date stamped on

vial label.

For research use only. Note

Mouse IgM kappa Isotype

Clone ID PAC-1
