ERK1(T202/Y204)+ERK2(T183/Y185) Antibody GRP420

Description	The protein encoded by this gene is a member of the MAP kinase family. MAP kinases, also known as extracellular signal-regulated kinases (ERKs), act as an integration point for multiple biochemical signals, and are involved in a wide variety of cellular processes such as proliferation, differentiation, transcription regulation and development. The activation of this kinase requires its phosphorylation by upstream kinases. Upon activation, this kinase translocates to the nucleus of the stimulated cells, where it phosphorylates nuclear targets. Two alternatively spliced transcript variants encoding the same protein, but differing in the UTRs, have been reported for this gene.	
Species/Host	Rabbit	Northyrold Bland
Reactivity	Human, Mouse, Rat	245 — 180 — 135 —
Conjugation	Unconjugated	100 — TSHR 75 — TSHR 63 —
Tested Applications	IHC-P, WB	^₄
Immunogen	KLH conjugated synthetic phosphopeptide derived from human ERK2 around the phosphorylation site of Thr183/Tyr185 (public_immunogen_range: 155-205/360)	
Form/Appearance	Aqueous buffered solution containing 1% BSA, 50% glycerol and 0.09% sodium azide.	
Concentration	1ug/ul	IHC-P of GRP420
Storage	Store at -20°C for 12 months.	
Note	For research use only.	
Isotype	lgG	
Clonality	Polyclonal	
Purity	Purified by Protein A.	
Uniprot ID	P28482	
Entrez	55945595	
Dilution Range	WB: 1:300-1000, IHC-P: 1:200-400
