### eNOS (phospho Ser1177) antibody GRP73

<b>Description</b>	Nitric oxide is a reactive free radical which acts as a biologic mediator in several processes, including neurotransmission and antimicrobial and antitumoral activities. Nitric oxide is synthesized from L-arginine by nitric oxide synthases. Variations in this gene are associated with susceptibility to coronary spasm. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]

Various whole cell extracts (30 µg) were separated by 5% SDS-PAGE, and the membrane was blotted with eNOS (phospho Ser1177) antibody (GRP525) diluted at 1:500. The HRP-conjugated anti-rabbit IgG antibody was used to detect the primary antibody.

eNOS (phospho Ser1177) antibody detects eNOS (phospho Ser1177) protein at cytoplasm by immunohistochemical analysis. Sample: Paraffin-embedded rat kidney. eNOS (phospho Ser1177) stained by eNOS (phospho Ser1177) antibody (GRP525) diluted at 1:500.
